

ABSTRACT: An improved cart for use in transporting various materials over all types of terrain. The cart has a frame **10** thru **19**, a cargo platform **60** thru **66** which is perpendicular to the frame to transport cargo and rotates to the frame for compact storage, and a handle **20** which retracts into the frame. A combination of a suspension system **40** thru **45**, wide wheel base **50**, and pneumatic tires **30** allows for widely diverse cargo to be transported over most types of indoor and outdoor terrain. The suspension system is fixed at forty five degrees to the frame providing the most efficient suspension system operation.
